TECHNICAL STACK

FRONTEND & UI/UX

React | Next.js | TypeScript | Tailwind CSS | State Mgmt | Framer Motion | HTML5 / CSS3 | Design Systems

BACKEND & DATA ENGINEERING

Python | C++ | OwlEyeEngine | SQL Architecture | PostgreSQL | MySQL | SQL Server | Modelado Relacional | Query Optimization

INFRA, CLOUD & NETWORKING

Cisco Networking | Linux Admin | RESTful APIs | Webhooks | Git / GitHub | Resend / Gateways

LANGUAGES

Español	Native
English	Intermediate (B1)

EXECUTIVE PROFILE

Full-Stack Software Engineer & Enterprise Systems Architect with a strong industrial engineering foundation. Specialized in architecting and building high-performance Enterprise SaaS platforms (React, Next.js, TypeScript), efficient backend engines (Python, C++), and optimized relational database schemas (SQL, PostgreSQL, MySQL). Characterized by a **first-principles mindset** and exceptional **cognitive composure** in high-ambiguity environments: systematically dissecting unknown, complex challenges with methodical perseverance, isolating root variables, and reducing problems to their atomic elements to engineer clean, deterministic, and scalable solutions. Proven track record of leveraging operational leadership, data traceability, and AI automation to eliminate technical bottlenecks.

FEATURED PROJECTS & ARCHITECTURE

Enterprise SaaS Platform & Interactive Web Systems

Lead Full-Stack Architect & Developer

- Architected and engineered high-concurrency interactive dashboards and enterprise web apps using React, Next.js, TypeScript, and Tailwind CSS.
- Implemented granular Role-Based Access Control (RBAC), real-time state synchronization, and secure enterprise payment gateway integrations (PayPal, Mercado Pago).
- Built event-driven API integrations, RESTful services, Webhooks, and transactional email pipelines achieving sub-second execution latency.

OwlEyeEngine & AI Automation Frameworks

Core Systems Creator

- Engineered high-throughput data processing engines in C++ and Python optimized for algorithmic efficiency and execution speed.
- Automated complex enterprise workflows by integrating AI-driven pipelines, reducing manual processing overhead by over 60%.
- Applied advanced memory management and query optimizations to deliver resilient backend utility suites.

CORE COMPETENCIES

- First-Principles
- Cognitive Composure
- Problem Decomposition
- Root Cause Analysis
- Operational Traceability
- Team Leadership
- SaaS Architecture

EDUCATION & CERTS

Networking Basics

Cisco Networking Academy

Score: 86/100

February 2026

Industrial Technician

Foundation in Systems, Physics & Process Engineering

WORK EXPERIENCE

Operations, Traceability & Data Systems Lead

2+ Years

Operational & Logistics Sector

- Led cross-functional operational teams, driving compliance, safety protocols, and consistently exceeding 100% operational target metrics.
- Architected real-time tracking and inventory data traceability workflows, eliminating stock discrepancies and improving supply chain throughput by 35%.
- Analyzed operational bottlenecks through data modeling and engineered custom software tools to enable data-driven executive decision-making.
