ENGINEERING DIFFERENTIATOR & OPERATIONAL IMPACT

ROI & Results-Driven

Focus on business solutions over passive tenure: Transforming operational maturity, industrial discipline, and technical rigor into software that cuts overhead, removes bottlenecks, and automates mission-critical systems.

High-Throughput Automation

Reduced batch data processing from **~5 manual hours to unattended minutes** via optimized C++, Python, and applied AI models.

Traceability & Error Reduction

Designed real-time tracking systems that **reduced reconciliation errors by 35%** and eliminated inventory discrepancies.

End-to-End SaaS Architecture

Built commercial web platforms with **React 19, Next.js, PostgreSQL, and RBAC**, payment gateways, and transactional webhooks (<1s).

Verifiable Traction & Open Source

Public ecosystem with **30+ auditable repositories** on GitHub (ExeDevCentral), proving continuous technical agility.

CORE COMPETENCIES

- Systematic Debugging
- Team Leadership
- Root Cause Analysis
- Operational Traceability
- Self-Directed
- Fast Learner
- Problem Solving

EDUCATION & CERTS

Industrial Technician
Foundation in Systems, Physics & Process Engineering

EXECUTIVE PROFILE & STRATEGIC APPROACH

Full-Stack Solutions Engineer & Software Architect with a strong industrial technical foundation. I specialize in building high-impact web applications with React 19, Next.js, and TypeScript on the frontend, and automation engines in Python or C++ on the backend, integrated with robust relational databases (PostgreSQL, MySQL, SQL Server). Proven experience leading cross-functional operational teams and designing traceability systems under demanding conditions. My key differentiator is transforming operational maturity and critical thinking into software solutions with immediate business ROI, cutting costs and automating mission-critical workflows.

ENGINEERING SOLUTIONS & FEATURED PROJECTS

Commercial SaaS Platforms & Payments (MultiTiendas / SportManager)

Production Architecture · github.com/ExeDevCentral

- Full architecture built with React 19, Next.js, TypeScript, and Tailwind CSS: modular design, Role-Based Access Control (RBAC), and differentiated Admin/Client workspaces.
- Payment gateway integrations (Mercado Pago, PayPal, Stripe) with webhook handling and transactional email delivery via Resend (<1s latency).
- Relational PostgreSQL architecture with 3NF modeling, query optimization, and real-time state synchronization via React Query.

OwlEyeEngine — C++/Python Automation Engine & AI Pipelines

High-Throughput Engine · github.com/ExeDevCentral

- High-throughput data engine in C++ and Python built for maximum computational speed and minimal memory footprint in batch processes.
- Automation pipeline integrating AI models to classify and process data batches that previously consumed ~5 hours of manual work, slashed to unattended minutes.
- Task-scheduler architecture with robust exception boundaries and structured logging for production debugging.

Polymath Zero — Formal Systems Workbench & Symbolic CAS

Engineering & Formal Verification · github.com/ExeDevCentral

- Rigorous formal learning platform powered by Astro 5, React 19, strict TypeScript, and KaTeX symbolic rendering.
- Interactive simulated CAS kernel with symbolic evaluation, differential/integral calculus, epsilon-delta limits, and reactive SVG visualizer.
- Automated test suite using Node.js native test runner and client-side state persistence with zero external bloat.

WORK EXPERIENCE

Operations, Traceability & Data Systems Lead

2+ Years

Operational & Logistics Sector

- Led cross-functional operational teams, coordinating shifts, daily targets, and safety protocols.
- Built a real-time stock and inventory tracking system in Excel/Google Sheets, eliminating data discrepancies and reducing end-of-day reconciliation errors by 35%.
- Diagnosed operational bottlenecks through data analysis and developed internal software tools to streamline reporting and decision-making.
